PSD

- Measuring range: -1 ... +1.5 to 0 ... 600 bar
- Temperature: -25 °C ... +85 °C
- Accuracy (at 25 °C): ±0.5 % FS
- Connection: G 1/4 male (other via adapter)
- Analogue output switchable mA or V
- Switching output: 2 transistors PNP
- Pressure range adjustable, 50 ... 100 % of the nominal range
- Display housing and electrical connection are independently rotatable 335°/343°
- 3-key programming

P2

### Description

The PSD is the ideal combination of pressure switch and transmitter with display. The parameters can be set directly on the device. The settings in combination with a comprehensive set of options make the PSD suitable for a wide range of demanding applications.

### Applications

- Machine tools
- Hydraulics
- Process technology
- Industrial applications

### Technical Details

Measuring principle: thin film on steel  
Measuring range: -1 ... +1.5 to 0 ... 600 bar  
-14.5 ... +22 to 0 ... 7500 psi  
adjustable 50 ... 100 % FS  
Output signal: 4 ... 20 mA  
0 ... 10 V<sub>DC</sub>, switchable mA or V  
Switching output: 2 transistors PNP  
Accuracy @ 25 °C typ.: ±0.5 % FS typ.  
Media temperature: -25 °C ... +85 °C  
Ambient temperature: -25 °C ... +85 °C  
Pressure unit for display: bar, psi, MPa, kPa, m WC,  
mm WC

### Electrical data

Output/supply voltage: 4 ... 20 mA or 0-10 V<sub>DC</sub>/  
24 (15 ... 30) V<sub>DC</sub>  
Switch-on-delay: typ. 200 ms  
Inverse-polarity protection,  
short-circuit strength  
@ 25 °C during 5 min.: integrated  
Current consumption: ≤ 30 mA

### Environmental conditions

Media temperature: -25 °C ... +85 °C  
Ambient temperature: -25 °C ... +85 °C  
Protection<sup>1)</sup>: IP65  
Humidity: max. 95 % relative  
Vibration: 10 g (10 ... 2000 Hz)  
Shock: 50 g/3 ms

<sup>1)</sup> See »Electrical Connection«

### Analogue Output

Output signal: switchable 4-20 mA or 0-10 V<sub>DC</sub>  
Accuracy: TEB<sup>2)</sup> @ -25 ... +85 °C  
[% FS typ.] ± 1.75  
accuracy @ +25 °C  
[% FS typ.] ± 0.5  
NLH<sup>2)</sup> @ +25 °C (BSL)<sup>2)</sup>  
[% FS typ.] ± 0.2  
TC<sup>2)</sup> zero point and span  
[% FS/K typ.] ± 0.03  
long term stability 1 year  
[% FS typ.] ± 0.1

Current limiting  
output signal: 4-20 mA: 25 mA (overload)  
0 ... 10 V<sub>DC</sub>: < 40 mA (short-circuit)  
Damping (rise time): 0.01 ... 3.00 s / 10 ... 90 %  
nominal pressure

### Switching Output

Accuracy: accuracy @ +25 °C  
[% FS typ.] ± 0.5  
TEB<sup>2)</sup> @ -25 ... +85 °C  
[% FS typ.] ± 1.0  
long term stability 1 year  
[% FS typ.] ≤ ± 0.3  
Adjustment range of  
switchpoints: 0 ... 100 % FS  
Switching hysteresis: ≥ 1 % FS switchpoint > reset point  
Switching resistance: ≤ 3 Ω  
Output function: hysteresis, window; normally open  
(NO), normally closed (NC)  
Switching current: ≤ 0.5 A each switching output  
Current limiting: ≤ 2 A each switching output  
Switching frequency: max. 200 Hz  
Delay time: 0 ... 99.99 s

### Display

Display: 4-digit 7-segment display 180°  
flippable with disable function  
standard decimal places:  
≤ 9: 3 decimal places  
10 ... 99: 2 decimal places  
100 ... 999: 1 decimal place

Switching status  
indication: 2 LED, red  
Operation: with 3 buttons and menu  
navigation according to VDMA  
24574-1

Display resolution: 0.1 % FS  
Display range: -3 ... 103 % FS  
Setting parameters: see table »Parameter«

<sup>2)</sup> See »Terminology«

**Mechanical Data**

Sensor (wetted parts): 1.4542 (AISI630)  
 Pressure connection (wetted parts): 1.4542 (AISI630)  
 Housing: steel, die cast metal galvanised  
 display housing plastic  
 Connection: G ¼ male, adapter can be ordered as separate item  
 Sealing: FPM  
 Male electrical plug: PA-plug M12x1.5-pin  
 Mounting torque: 15...20 Nm  
 Housing alignment: display 335° rotatable, max. 2.5 Nm  
 electrical connection 343° rotatable, max. 5 Nm  
 Pressure peak damping element: Ø 0.4 mm  
 Weight: ~189 g

**Measuring Accuracy 0.5 %**

Measuring range [bar]	Overpressure [bar]	Burst pressure [bar]
0...2.5	7.5	50
0...4	12	60

Delay

**Non-linearity**

The largest deviation from the effective characteristic line of an ideal reference line. The reference line can be defined as a limit point adjustment, a BSL or a BSL through 0.

Specifications: Non-linearity, Hysteresis

**BSL Best Straight Line**

The reference line according to the BSL or the minimum value adjustment is placed in such a way that the maximum positive and negative deviations are as small as possible.

Specifications: Non-linearity, Hysteresis

Specifications: Accuracy NLH (BSL)

**BSL through Zero**

As an additional requirement for the minimum value adjustment, the BSL through zero (also BSL/0) must go straight through zero or the origin.

Specifications: Accuracy NLH (BSL through zero)

**NLH Non-linearity and Hysteresis**

Largest deviation from the ideal characteristic line (BSL, BSL/0 or limit point). In pressure measuring instruments, the non-linearity and pressure hysteresis are given together at a constant temperature.

**Temperature Coefficient TC**

Change of measured value for zero point and span as a result of changes in temperature

**Long-term Stability Long-term Drift**

The change of accuracy due to aging under certain reference conditions during a certain period of time, typically 1 year.

**TEB Total Error Band**

Total error (root from sum of the square of the deviations) due to measurement deviations (accuracy) and temperature influence (temperature coefficient TC). The temperature influence is usually given in the information across a range larger than that given in the standard (-10...+60°C). Whilst DIN 16086 also continues to add to the long-term stability over a year, the information is subject to ex-works conditions for obvious reasons.
