Who Are We?

We are your industrial instrumentation partner of choice with comprehensive solutions for measuring what matters.

For over 40 years, KOBOLD has been a value-driven leader in process measurement and control solutions. We offer one of the industry's broadest lines of sensors, switches, and transmitters to measure and control flow, pressure, level, and temperature.

We offer excellence in engineering, high value products, and exceptional customer partnerships that last beyond the sale. Because we design, manufacture, sell, and provide support for our products, you can be assured that you and your application are in expert hands.

Why Choose KOBOLD?

Our Approach: Partnership for the "Long Haul"

We aren't just interested in selling you instrumentation. You are our priority. Trying to wade through the extensive technologies and options can be a bit intimidating. You don't have to figure it out on your own. We are here to partner with you, providing free advice from our in-house engineering experts who have decades of collective experience.

We are old-fashion in our beliefs about what doing business should look like. We still have someone answering our phone who will quickly direct you to the right person. We still believe in delivering true value and not subpar quick-fix products that become headaches down the road. We build our products like we build our relationships, for the "long haul".

For certain large-scale projects, we are also able to provide demo instrumentation so you can be confident that our solution is the right fit for your application. We want our products to be the best fit as much as you do. There is no project too large or too small for us.

US Manufacturing Built on German Engineering

We believe that "Made In The USA" still means something. Our products are built with that in mind as we aim to exceed the standards and ideals of quality-focused US manufacturing. We offer the best of both worlds. German engineering is still known as being among the finest and we are proud to build some of the most innovative products in the world. We are also focused on sourcing practices that allow us to provide higher quality components, shorter lead times, and longer lasting products than other instrumentation manufacturers.

KOBOLD USA's Manufacturing Team

Comprehensive Product Line: We Don't Have to "Force a Fit"

We offer one of the industry's broadest lines of sensors, switches, and transmitters to measure and control flow, pressure, level, and temperature.

We have historically set the bar for innovation and excellence, helping to shape the field of industrial instrumentation into what it is today. Our technologies offer a solution-oriented way to control the most diverse and complex variables and can be easily integrated into a wide variety of systems in many industrial and commerical sectors.

We will not try to sell you any instrumentation that isn't ideally suited for your application. Because we are unique in the extensiveness of our product line, we don't have to try and "force a fit" just to make a sale like other companies with limited product lines. In the event we do not have the right solution, we will do our best to point you in the right direction.

Unique/Difficult Applications & Customizations: We Do What They Can't

While we offer a wide variety of standard instrumentation, we are also able to handle unique, difficult, or challenging applications that others can not. Our familiarity with exotic materials allows us to offer solutions for variables that are frequently hard to accommodate. Because we are the manufacturer, we also have the flexibility of being able to provide customized solutions in certain circumstances, based on the exact application needs.

OEM Partner Program

Decades of Experience - Superior Solutions & Service

KOBOLD offers decades of expertise in partnering with OEM Manufacturers. We are one of the leading solution providers for Industrial Machinery Applications. Because we offer such a broad line of instrumentation for flow, level, pressure, and temperature and can customize certain product aspects we can provide the most budget-conscious options because we do not have to try and force a fit between your application and a limited product line, unlike some other manufacturers.

Our engineers partner with our customers for no cost, helping as needed through the life or the project and the product. Depending on the product and the quantity needed, demos are available for testing and design purposes. Pricing is also commensurate with order quantities. When requesting pricing for an OEM project, please mention to our sales staff that you are an OEM manufacturer and would like to talk with someone about our OEM Partner Program.

Food Preparation

KOBOLD's MIM Magnetic Flow Meter is an integral component of a salad dressing dispensation machine for a fresh food chain. The machine provides the diner with a consistent experience by ensuring the same amount of dressing is applied to any salad that is served anytime at any of their locations.

Smart Home Water Leak Detection

To protect against unnecessary expenses, damage, and wasted water consumption, our DPL Paddle Wheel Flow Meter is the flow measuring element in a smart home system that monitors the entire home for leaks. If a leak is detected by the DPL, a shutoff valve is actuated and an alert is sent to the homeowner.

Fire Suppression

To ensure that the full length of a fire suppression system recieves adequate liquid to fight fires, our REG Automatic Flow Reglulator is used to regulate flow so there is no risk of the liquid being consumed within the first few feet of piping, rendering the parts of the sytem located farther away from the water source less effective. The REG ensures that the entire system receives the necessary flow.

Chemical & Caustic Media

Compatible Solutions: Flow/Level

Aggressive media such as chemicals, caustics, alkalines, and acids bring an element of difficulty to finding suitable long-lasting instrumentation for an application. Many flow and level products are not offered in materials that can handle challenging media. KOBOLD offers a wide variety of flow and level options that are either made entirely of compatible material or can be coated, clad, or lined to combat corrosion from the media. Unlike many other manufacturers, we also specialize in many exotic material options. Below is a sample of our products that can be used with a wide variety of difficult media.

Any combination marked as "possible" requires further investigation and confirmation by the purchaser. Application variables, such as temperature, have a direct effect on actual media compatibility. Seals, connections, cables, and electrode materials that come into contact with the media must also be evaluated by the purchaser. NBK Magnetic Level Gauges

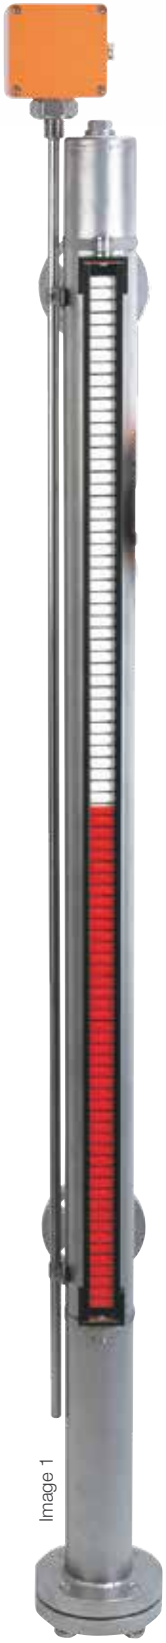

Image 1

KOBOLD NBK bypass magnetic level gauges are used in applications requiring visual indication, continuous measurement, and the control of liquid levels. Any free-flowing, compatible media with a viscosity less than 200 cPs is compatible. The NBK's design relies on the hydrostatic pressure principle to display tank level on a side-mounted measuring chamber. A float, which contains a ring magnet, rises and falls with the liquid level in the bypass tube. This approach allows the NBK to be built with an all-metal construction, eliminating the breakage and leakage problems frequently experienced with glass tube designs. Visual indication, signal transmission, and switching is possible by mounting magnetically-sensitive devices on the exterior of the bypass tube.

The KOBOLD NBK-M mini bypass magnetic level gauge provides many of the unique features of our standard NBK Series, but at a fraction of the cost. Similar to the full-sized NBK Series, the NBK-M uses KOBOLD's ring magnet float design, allowing the addition of roller indicators, switches, and other options almost anywhere on the periphery of the bypass tube. The use of lighter gauge materials and a streamlined manufacturing process make the KOBOLD NBK-M a very economical choice for lower pressure and shorter length level applications.

The KOBOLD NBK-04 top-of-the-tank mount magnetic level gauge combines the rugged simplicity of our NBK Series with above-the-tank liquid level indication.

REGulation

KOBOLD REG: Flow Regulation Made Easy

- ✓ **Made In The USA**
- ✓ **No Power Needed**
- ✓ **Unique Design**

Superior Flow Regulation:

Unlike other models, our unique REG design does not use any rubber. Temperature, chemical influence, and aging affect the molecular structure of rubber and reduces its elastisity. Once the rubber is compromised, the flow can no longer be regulated. Our all-metal design provides a longer service life. The REG excels in protecting pumps from water hammer, cavitation, and overheating from sudden lack of flow. They are also maintenance free and provide tamper-proof allocation of flow for water circuits.

Features:

- Provides a Constant Flow Rate
- Long Service Life Provides Significant Cost Savings
- Ideal for Batching, Distribution, and Restriction
- Protects Against Water Hammer, Overheating, and Overload
- Simple and Effective
- Flow is Limited, Regardless of Pressure Fluctuations
- High Quality Stainless Steel Build
- Completely Maintenance-free
- No Auxiliary Power Needed to Operate
- Secure from Tampering or Manipulation
- Uniform Supply for Multiple Consumers

IO-Link

Display is rotatable in 90° Increments

The new DUK Ultrasonic Flow Meter with C3T0 electronics offers temperature-compensated measurement, expanded media viscosity compatibility, IO-Link, bi-directional flow, and provides extensive capabilities for on-site programming.

Previously, the DUK was only for water and water-like media. By incorporating additional intelligent electronics with customized parameters, it is now compatible with most homogeneous and Newtonian media under 68 cSt. During the conception phase, KOBOLD used customer feedback as a basis for developing this innovative flow meter specifically for non-conductive media. The DUK is an excellent alternative to magnetic flow meters, which are unable to measure non-conductive media.

The DUK is designed for smaller pipe sizes and covers a large measuring range by delivering an exceptional turndown ratio of 250:1. It has two individually configurable outputs, which can function as a pulse, alarm, or analog outputs. This makes them easier to integrate into different processes or auxiliary circuits.

It features high visibility process cues such as the display color changing when a certain quantity has been dosed or when a limit value has been exceeded. Batching can be started and stopped locally or via an external control input. The DUK features response times of less than one second.

The DUK was further designed with longevity in mind as the electronic connections are now connected by a plug, enabling easy on-site maintenance. It also combats internal condensation that can form from ambient temperature differences between the inside of the housing and the external environment.

Flow Meter Selection

What You Need to Know

Choosing a flow meter can be very overwhelming. When it comes to finding the best fit for your application, being thorough during the selection process can have big payoffs. Avoid equipment malfunction, damage, failure, and incorrect readings by asking the right questions at the beginning. But where should you start?

The Basic Process

- Who will be using it? What do they need to use it for? Where will it be placed?
- Does the process require totalizing or batching capabilities?
- Is visual rate indication needed only? Is a switch or transmitter needed? Is local or remote indication needed?

The Place of Installation

- What is the size of the pipe and what is it made out of?
- Is the environment around the area stable or variable? Is there danger of explosion? Is the area a harsh environment?
- What length of straight run of pipe is possible before and after the instrument placement?
- Will there be other types of instrumentation, valves, or pipe bends close to the flow meter either upstream or downstream?
- Are there space limitations at the installation point?
- Will the installation area require a certain angle that the instrument will be installed at?

The Media Characteristics

- Is it liquid, gas, vapor, steam, slurry, or multi-phase media?
- Is it clean or dirty?
- Is the nature of the media corrosive?
- What is the media density, viscosity, temperature, pressure? Do these remain constant?
- Is the media conductive and if so, to what extent?
- Is the media Newtonian or Non-newtonian in nature?
- Does the media have any coating or crystallizing properties?
- Is there any suspended particulate matter? If so, how large are the particles?
- Any ferrous material in the media?

Certifications

- What sort of regulatory compliance are you subject to?
- Do you have hygienic requirements for the application?
- Does the media have the potential to be explosive?

The Flow Profile

- Is it likely that the media may contain air bubbles?
- Is the process such that the pipe will always be totally full of the media all the time?
- Will the flow rate remain relatively constant or will there be large fluctuations?
- Is there a chance of pulsating flow?
- Will the flow be largely laminar or turbulent?
- What sort of turndown is needed to accommodate the full range of flow?
- What is the minimum flow rate?
- What is the maximum flow rate?
- Will the media flow in one direction or will it be bi-directional?
- Is pressure loss in the line from the flow meter an important consideration?

Accuracy/Repeatability/Resolution

- Accuracy: How exact does the measurement need to be?
- Repeatability: How important is it for the meter to produce "grouped" results?
- Resolution: How incremental do the measuring units need to be?

Flow Meter Selection Summary Chart

Element to Consider	Essential Question to Answer
Price	What will the total cost of the meter be during its lifetime and how long will it last?
The Basic Requirements	What are the essential things that the meter needs to provide? Measurements, outputs, batching, etc?
Installation Considerations	Will it fit and function properly where it has to be installed?
The Process Media	Will the meter work with all the characteristics of the media?
Flow Profile	Is there something about how the media will move through the meter that will cause problems?
Precision	How precise does the meter need to be in relation to the cost of the meter?
Certifications	Does my application require any specific certifications for my instrumentation?
Communications	Where does the data produced by the meter need to go and how will it get there?

Does it still sound intimidating and a bit too much to tackle on your own? Don't worry. We have decades of experience and knowledgeable sales engineers who know how to guide you through this process. We would be proud to partner with you to find the best solution for your application.
